**Win Story:** Oracle EBS is a mission-critical component of the solution, They have Oracle EBS11i(11.5.10.2) running on Solaris with Oracle SSO.  
Customer is looking for increased performance, improved security, reduced TCO.  
Oracle SSO should replace with IDCS.

**IT Landscape:** On-Prem infrastructure hosting at Oracle EBS, Oracle SOA , Oracle Databases, Tableau, Snowflex

**IT Drivers:** Reduce high infrastructure costs. Enhanced risk due to gaps in enterprise security. Modernize Oracle EBS on Solaris OS to Linux.

**Project challenges and resolutions** Customer is looking for minimal downtime and not ready with big-bang approach.  
As the Database size is 16TB We adopted XTTS method and migrated the Database first to on-Prem(Linux).  
In the Phase 2 automated the pre and post migration activities to cut down manual intervention.  
Phase 3 Hybrid DR from on-Prem to AWS to have least downtime.

**SOLUTION** Move 20+ workloads to AWS  
Modernize Oracle EBS from Solaris to AWS  
Comprehensive Cloud & Enterprise Security solution

Implement Cloud Disaster Recovery  
Implement EC2 , EFS
