1st complete Data Centre
Migration to OCI

10+ Workloads
Moved to Cloud

Including EBS Lift & Shift to
OCI

Comprehensive DR &
Cloud Security

KFIL encountered a critical challenge when their **on-premises OVS/OVM infrastructure** reached its compute capacity limit. As the business continues to experience robust growth, it became evident that the existing on-premises solution lacked scalability. In response to this pressing need, the decision was made to **swiftly transition to Oracle Cloud**.

This strategic move was driven by the imperative to accommodate the company's expanding requirements and ensure that the infrastructure aligns with the pace of the organization's growth.

Our project aims to seamlessly provision and migrate KFIL's operations to the Oracle Cloud, providing the scalability, flexibility, and performance necessary to support their evolving business needs.
